

PUBLIC COMMITMENTS TO SUSTAINABILITY

Solví Group's sustainability strategy is based on the three pillars of the ESG (Environmental, Social and Governance) and on the themes defined through the materiality matrix, presented in the Socio-environmental Report annually and built from the opinion of internal and external stakeholders.

INTRODUCTION:

Solví Group's internal and external actions are guided by best practices within the ESG scope. Protecting the environment goes beyond the care of the waste and natural resources. We believe that good sustainability practices are tied to the strengthening of the communities where we operate, generating jobs, fostering social inclusion and environmental education. Thus, we seek to leave as a legacy a chain of generation of wealth for society and innovative solutions for our customers.

We also aim to establish lasting, transparent and ethical links with our Stakeholders, promoting the training of professionals and healthy citizens and strengthening our commitment to sustainability.

PRINCIPLES:

Work with responsibility, transparency, legitimacy in communication with stakeholders, Ethics and Integrity with a focus on meeting the ESG pillars.

PUBLIC COMMITMENTS:

Energy self-sufficiency - Be self-sufficient in electricity in our UVSs by 2026.

Water self-sufficiency - Be self-sufficient in water management in production processes in our UVSs by 2026.

GHG emission - If zero carbon impact becomes for emissions from Solví Group activities by 2035.

Businesses that support the Circular Economy – by 2030, increase by 100% the revenue of businesses focused on resource recovery and regeneration of ecosystems, including reverse waste logistics, waste sorting, composting, blending and co-processing, as well as the treatment of effluents and private services of TWM (Total Waste Management).

Zero Bribery - Keep zero cases of corruption in the Solví Group.
